**CSE214 – Spring 2023**
**Recitation #12**

**1a. [10 minutes]**

| | Worst Case | Average Case | Best case |
|---|---|---|---|
| Binary search of a sorted array | | | |
| Insertion sort | | | |
| Merge Sort | | | |
| Quick Sort without "median of three" pivot selection | | | |
| Bubble sort | | | |
| Selection sort | | | |
| Heap sort | | | |
| Counting sort | | | |

---

1b. When does the best case for bubble sort and insertion sort occur?

1c. Show that the best case for bubble sort and insertion sort is O(n).

2a) Show that the worst case time complexity of quick sort is O(n^2).

2b) Show that the time complexity of heap sort is O(n log n).

**3)** Perform Merge Sort on the following array: [66, 22, 32, 15, 28, 43, 29, 80]

**4.[10 minutes]** Perform Heap Sort to sort the array `[75, 20, 1000, 7, 9,17]` in ascending order.

4a.
What are the number of operations to convert an array into a heap?

4b.
For a heap array, what is the formula to find the parent, left child, right child?

4c.
Is an array sorted in ascending order always a min-heap? Why or why not?

4d.
How would the first first iteration of quicksort look on this array if we have the pivot be the last element?

**5. [5 minutes]** Suppose we are sorting an array of eight integers using quicksort, and we have just finished the first partitioning with the array look like this:

2 5 1 7 30 12 11 10

Which statement is correct?

A. The pivot could be either the 7 or the 30
B. The pivot could be the 7, but it is not the 30
C. The pivot is not the 7, but it could be the 30
D. Neither the 7 nor the 30 is the pivot
